The role of the Rotterdam Rules in safety and facilitation

Submitted by CMI

SUMMARY

Executive summary: The document highlights the role that the Rotterdam Rules would play in reducing the risk of container fires by: (1) requiring greater sharing of information between shippers and carriers; and (2) facilitating electronic commerce, which will better enable operational personnel to have timely access to the information they need to ensure vessel safety.

*Strategic direction,
if applicable:* 5

Output: 5.1

Action to be taken: Paragraph 15

Related documents: CCC 6/14; CCC 6/6/17 and resolution FAL.12(40)

Introduction

1 The Sub-Committee on Carriage of Cargoes and Containers (CCC), at its sixth session, established the Correspondence Group on a Review of Maritime Special Provisions owing to the increasing number of casualties related to container fires reported over the past several years (CCC 6/6/17, paragraph 4). The Correspondence Group was instructed to review certain maritime special provisions (SPs) in the IMDG Code and provide recommendations on how to proceed to CCC 7 (CCC 6/14, paragraph 6.22).

2 The co-sponsors of document CCC 6/6/17 (Liberia, ICS, IUMI, BIMCO, ICHCA, the International Group of Protection & Indemnity Associations, IVODGA and WSC) identified a principal source of the underlying problem, explaining:

"Non-declaration or misdeclaration of dangerous goods in accordance with the IMDG Code, either inadvertent or deliberate, deprives ocean carriers, shipping companies and transport intermediaries of critical information that would otherwise allow them to

arrange for proper handling and stowage, depending on the significant hazards that these shipments present. As such, non-declaration or misdeclaration leads to unsafe stowage and cargo segregation which dramatically increase the risk of fire, resulting in potential loss of life, damage to the environment and assets."

3 The CMI has prepared this document to serve as a source of information to explain how the ratification of the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea, adopted on 11 December 2008 (hereafter called the "Rotterdam Rules") would provide an important part of the solution to the underlying problem that the above Correspondence Group has been tasked with addressing and would contribute to facilitating electronic commerce.

The Rotterdam Rules promote safety by requiring greater sharing of information

4 The international conventions that most clearly address safety at sea, such as the SOLAS Convention, focus on the relationship between private parties (usually carriers) and public authorities. That is obviously an essential part of any solution to the problem of casualties related to cargo fires. But in the context of cargo fires, a party's ability to fully comply with safety regulations is often dependent on the relationship between a carrier and the shipper or other cargo interests. The Rotterdam Rules govern that contractual relationship, and thus complement the work of conventions such as SOLAS and FAL.

5 The Rotterdam Rules were designed to modernize the international regime governing contracts for the carriage of goods by sea and they do so in a number of different ways. Of particular relevance here, the Rotterdam Rules recognize the importance of each party's providing timely and accurate information, and they facilitate the most efficient method for doing so. Because onboard fires often result from a shipper's failure to provide timely and accurate information to the carrier, or even a carrier's failure to provide timely and accurate information to the shipper, having a regime that requires and facilitates the timely exchanging of information is an important factor in addressing the problem.

6 Turning to the specifics, multiple provisions in the Rotterdam Rules explicitly require the exchange of timely and accurate information. Article 29(1)(a) goes beyond the existing carriage conventions (such as the Hague-Visby and Hamburg Rules) to require a shipper to "provide to the carrier in a timely manner" the "information, instructions and documents" needed for "the proper handling and carriage of the goods, including precautions to be taken by the carrier or a performing party," whether or not the goods have been recognized as dangerous in the IMDG Code. In countries where local authorities have enacted safety measures in addition to the international requirements, article 29(2) preserves their force and article 29(1)(b) requires the shipper to timely provide the carrier with the "information, instructions and documents" needed to comply with those local regulations.

7 More importantly, the Rotterdam Rules extend the traditional requirement to furnish information at the beginning of the process. Article 28 establishes a new procedure to enable either the carrier or the shipper to obtain information or instructions from the other whenever necessary during the process. If a problem arises in the middle of a voyage, for example, or if a carrier develops suspicions about an unusual shipment, article 28 – unlike any of the existing carriage conventions – provides a mechanism that enables the carrier to obtain the information or instructions that it needs to avoid a serious incident.

The Rotterdam Rules promote safety by facilitating electronic commerce

8 Even if a shipper properly declares the cargo, the information must still be conveyed to operational personnel in a timely manner if it is to be effective. In a system that relies heavily on paper documents, information may be conveyed inaccurately, or it may not be accessible to those who need it, or it may not be available in time. Inaccurate, inaccessible or untimely information also causes serious incidents.

9 The obvious solution to the over-reliance on paper documents is to instead use electronic equivalents. If the ocean shipping industry used a system based on blockchain, for example, everyone who needed to know the information or instructions furnished by the shipper would almost immediately have access to that information in the form furnished by the shipper – even if the goods pass through multiple intermediate parties before reaching the ocean carrier.

10 Unfortunately, the industry has been slow to adopt electronic equivalents to traditional shipping documents. A principal reason is that the existing carriage conventions do not provide the necessary legal framework to support electronic commerce. The Rotterdam Rules, in contrast, were specifically designed not only to accommodate electronic commerce but to facilitate it. Indeed, the original proposal to undertake the project came from the United Nations Commission on International Trade Law (UNCITRAL) E-Commerce Working Group. Even the popular press has identified the failure to ratify the Rotterdam Rules as an obstacle to the growth of electronic commerce.*

11 When the Rotterdam Rules enter into force, not only will shippers and carriers have stronger legal obligations to share the information that can help prevent container fires and other serious incidents, but the legal basis will exist to permit industry to develop and rely on a more effective system to get that information to the operational personnel who need it in time for them to use it. In this regard, the Rotterdam Rules will complement Standard 1.3*bis* of the FAL Convention, which governs the exchange of information between ocean carriers and government authorities. The Rotterdam Rules facilitate electronic commerce among all the parties to a transaction on a door-to-door basis — thus covering the flow of information from the original shipper to the ocean carrier's operational personnel.

Conclusion

12 CMI recognizes that the Rotterdam Rules by themselves will not solve the problem of container fires and other serious incidents, but it would contribute to the solution. And without the Rotterdam Rules, the existing outdated legal regimes governing contracts for the carriage of goods by sea will continue to act as a barrier that prevents the industry from developing the most effective operational solutions to the problem.

13 CMI recognizes further that the Rotterdam Rules strengthen the exchange of electronic information in the maritime industry, and this would have a positive impact in the efficiency of maritime transport.

14 CMI therefore invites the FAL Committee to recognize the importance of the Rotterdam Rules as it studies the underlying problem and makes recommendations on how to proceed. Ratifying the Rotterdam Rules is one step that Member States can take as part of an overall solution to the problem that also would be beneficial to extend the use of electronic exchange of information in the maritime industry.
